**Nuneaton, United Kingdom**  
*2013 – 2015*

### Etone College

*GCSE - Accomplished 7 GCSE'S ranging from B-C including English Language*

**Nuneaton, United Kingdom**  
*2008-2013*

## TECHNICAL SKILLS

---

- HTML 5
- CSS
- Bootstrap
- jQuery
- Java script
- Node JS
- GitHub
- APIS

## PROJECTS

---

### Weather API Application

This project is a weather dashboard application with search feature that allows users to look up current weather conditions and forecasts for many cities. I have incorporated local storage in the application will allow users to view the last search's when coming back onto the application.

The technologies I have used is momentjs () to allow users to see the current date. I have used open weather API to allow users to view weather data and jQuery. Bootstrap has also been implemented into this page to allow the web page to be responsive. Also used HTML 5 and CSS as a basis of the whole application

Link the application - <https://farhahdin1997.github.io/weatherApp/>

### Password Generator

Created a programme that generates a random password based on the user's preferences. This app will run in the browser and use your JavaScript code to dynamically change the HTML and CSS. It will also have a sophisticated user experience and will be responsive, meaning it will adjust to different screen sizes. The

technologies used during the project is HTML , CSS and JavaScript,

### **Web API – Code quiz**

A timed quiz that allows the user to have 60 seconds to complete this quiz. The user will receive a point for each correctly answered question. However, the timer will be deducted 5 seconds for each wrongly answered question. But the score will be displayed once the quiz is completed or the timer approaches zero, and you will be given the option to submit your high score.

### **Technologies Used**

- Local stooge
- HTML 5
- CSS
- Bootstrap
- Java Script
